```
======================================================
   AUTOMATED DIABETIC RETINOPATHY SCREENING REPORT
======================================================
Generated: 12-Sep-2026 13:38
Patient / Image ID: PATIENT-0001
--- Image Quality ----------------------------------
Good image quality (94/100).
--- Prediction -------------------------------------
DR Severity Level : 3 - Severe NPDR
Referral Status   : REFERABLE DR (Level >= 2) - refer to ophthalmologist
Model Confidence  : 54.3%
Full class probabilities:
   3_Severe               :  54.3%
   0_NoDR                 :  36.6%
```

Patient / Image ID: PATIENT-0001
--- Image Quality ---------------------------------------
Good image quality (94/100).
--- Prediction ------------------------------------------
DR Severity Level : 3 - Severe NPDR
Referral Status   : REFERABLE DR (Level >= 2) - refer to ophthalmologist
Model Confidence  : 54.3%
Full class probabilities:
   3_Severe               :  54.3%
   0_NoDR                 :  36.6%
   2_Moderate             :   6.6%
   4_Proliferative        :   2.1%
   1_Mild                 :   0.4%
--- Visual Evidence (Grad-CAM + Lesion Heuristics) --------
Grad-CAM highlights the retinal regions that most influenced
the severity prediction (see heatmap panel).
   Microaneurysms (candidate)      : 171
   Hemorrhages (candidate)         : 26
   Exudates (candidate)            : 169
   Neovascularization              : SUSPECTED (abnormal vessel density hot-spot)
   (Lesion counts are heuristic image-processing estimates,
    intended as reviewer pointers, not a validated detector.)
--- Independent Statistical Cross-Check -------------------
Lesion-burden risk score : 100/100
Lesion burden suggests REFERABLE - corroborates further review.
--- Recommendation ----------------------------------------
Severe NPDR. Recommend prompt ophthalmologist referral (within weeks).
This report is generated by an AI-assisted screening tool and is intended to support, not replace, clinical judgement.
